Use

Type B welding: recommended when dexterity is required, as for TIG welding. Please use Type B welders gloves for welding processes other than Type A.

Limits of use

Do not use: for protection against chemicals, for handling hot parts in extreme conditions. Gloves must not be worn when there is a risk of entanglement by moving parts of machines. There is no standardised test method at present for detecting U.V penetration of materials for gloves but the current methods of construction of protective gloves for welders do not normally allow penetration of U.V radiation. Arc welding: These gloves do not provide protection against electric shock caused by defective equipment or live working. The electric resistance is reduced if gloves are wet, dirty or soaked with sweat, this could increase risk.

Abrasion Resistance (1 - 4)	2
Blade Cut Resistance (1 - 4)	0
Tear Resistance (1 - 4)	4
Puncture Resistance (1 - 4)	1
0: indicates the globe falls below minimum level for given hazard	
x indicates the glove has not been submitted to the test or it is not suitable	
Levels of glove: 1 = lowest, 4 = highest. 5 = highest for blade cut resistance
